

"With the advanced inventory planning for SAP we have been able to significantly reduce the number of items we have to expedite by air, reducing our costs and ensuring we maximise profitability" - James Mills, Operations Director **Talar Made**

Advanced Inventory Planning for SAP Business One

Valogix Inventory Planner is a next generation inventory forecasting and planning tool that will forever change the way you plan your inventory.

Key benefits:

- Reduction of investment in held inventory by an average of 20%
- Reduction in purchase planning time of up to 85%

If you could reduce your held inventory by 20% how much cash could you free up?

Inventory Planner enables you to forecast, plan, and optimize inventory with less effort and more accuracy. And the module is affordable, fast, and easy to use. It is a smart system and does the complex computations for you. Inventory Planner determines which items to stock, which items to order, and which items are excess or overstocked. It manages an unlimited number of items and locations, and provides flexibility while different planning parameters allow more precise planning. Inventory Planner helps you manage by exception. The software's intelligence provides "Alerts" of potential problems, before they occur... saving you valuable time and assisting you to avoid potentially serious Customer Satisfaction problems.

SAP Business One Integration

Advanced inventory planning is seamlessly integrated in SAP Business One providing automated forecasting, replenishment, and optimization. It manages an unlimited number of items and locations simultaneously. Users have instant visibility to the Master warehouse, to field stock, retail locations, and everything in between. The proprietary planning engine efficiently plans for each item/location combination based on its own unique characteristics. Optimization provides exceptional value by reducing inventory safely and controlling purchasing spend.

Predictive Demand and Replenishment Planning

- Enhanced forecasting for highly seasonal and slow-moving items
- Vendor planning for easy replenishment management
- New Items are easier and faster with the "proxy process"
- Simultaneously generates new orders and stock transfers

Sophisticated Item Management

- Enhanced details show lead time, service levels, vendor, and more
- Full visibility at all locations: virtual, real, & customers (if desired)
- Dynamically computes and reports on excess and obsolete inventory
- Automatically sets shelf stock by item and location

Enhanced MRP Planning

- Restricts supply and demand in multiple warehouse environments
- Automatically computes forecast for production orders
- Replenishment planning is optimized for better asset and spend control
- Creates a single purchase order per supplier covering multiple warehouses
